

Name:	Colton Phass	Current Position Title:	Software Engineer I
Years of Experience	2		
Security Clearance	Active Public Trust		
Portfolio	github.com/coltonphass coltonphass.com		
Education			
- B.S., Computer Science, University of Maryland Global Campus (in progress; anticipated graduation Summer 2027) - A.A.S., Computer Information Systems (High Honors, 3.85 GPA; Phi Theta Kappa), Harford Community College, 2025			
Certifications and Training			
- Scrum Fundamentals Certified (SFC), SCRUMstudy, October 2026 - Scrum for Ops and DevOps Fundamentals Certified, SCRUMstudy, October 2026 - DoD Cyber Awareness Challenge 2026, Defense Health Agency (JKO), December 2025 - HIPAA and Privacy Act Training, Defense Health Agency (JKO), December 2025 - Insider Threat Annual Training, Defense Health Agency (JKO), December 2025 - Operations Security (OPSEC), Defense Health Agency (JKO), December 2025			
Summary - Role			
Colton Phass is a Software Engineer with two years of development experience, including hands-on sustainment of a Defense Health Agency case management system for pediatric special-needs services, built on OpenText Process Automation (formerly AppWorks). Colton supports the full client lifecycle, from referral and eligibility through service planning and discharge. His experience includes co-developing a duplicate-record linking process and resolving approximately 1,200 duplicate records, engineering read-only safeguards for linked records, modernizing forms to Section 508 standards, and executing complex data remediations through XML/SOAP web services. Recognized by the program management office for clear communication and timely, organized delivery, Colton brings hands-on experience with OpenText Process Automation, BPM development, XML/SOAP, SQL Server, CSS, and Agile/Scrum, using tools including SQL Server Management Studio, Visual Studio Code, Notepad++, Agent Ransack, Firefox Developer Tools, mRemoteNG, Adobe Acrobat, and NVDA and ANDI for accessibility testing.			
Work Experience			
Software Engineer I, Kreative Technologies		November 2025 – Present	
- Sustains and enhances a Defense Health Agency case management system on OpenText Process Automation, supporting child lifecycle workflows, case notes, provider time tracking, and related processes. - Co-developed the duplicate-record linking process with the technical lead, then linked and verified roughly 1,200 duplicate child records from legacy data migration and cross-site entry, strengthening data integrity. - Engineered read-only safeguards for linked duplicates through approximately 120 changes to rules, forms, properties, and security settings, blocking create, update, and delete actions while preserving view access. - Developed a BPM that automatically sets or clears a record’s duplicate flag on link and unlink, and extended an existing discharge workflow to remove dependent outcome records when a discharge is rejected, preventing orphaned data. - Modernized multiple forms, including referral, service detail, outcome summary, and family service plan forms, and delivered extensive Section 508 remediation for screen-reader labeling and color contrast, validated with NVDA and ANDI. - Executes data remediations through XML/SOAP web services, from bulk updates of up to 30 records to complex multi-call fixes, including relocating a child between lifecycle processes and finalizing 120 session notes after diagnosing a BPM timeout. - Authors investigation reports for the program management office, including root-cause analysis of a workflow defect that caused system errors when users linked multiple addendum records without saving. - Contributed to the system’s data dictionary by designing the team’s tracking workbook and documenting entities, relationships, BPMs, rules, and SQL table locations. - Supports changes across development, upgrade, and production environments by writing test steps, guiding testers, and documenting code changes. - Partners with the program management office on requirements and demonstrations and escalates platform issues to OpenText support; recognized for communication, timeliness, and organization, and commended for the duplicate-remediation effort.			

Name:	Colton Phass	Current Position Title:	Software Engineer I
Student Research Assistant, Harford Community College			March 2025 – Present
▪ Contributes AI and machine learning research to the college’s FY25 curriculum initiative, supporting credit and non-credit course design and related academic publications. ▪ Developing the curriculum for a new credit-bearing artificial intelligence course. ▪ Evaluates AI platforms for instructional use, including ChatGPT, Claude, Gemini, DeepSeek, Hugging Face, TensorFlow Playground, Orange Data Mining, Google Colab, and Jupyter Notebooks.			
Student Curricular Co-Designer, Harford Community College			May 2024 – December 2024
▪ Co-designed updates to CIS 217: Introduction to Web Development Programming through weekly curriculum reviews with faculty. ▪ Built and QA-tested quizzes and programming projects covering HTML5, CSS3, JavaScript, React, and Node.js, and supported instructors in deploying new materials.			
Volunteer Web Developer, Independent			January 2024 – Present
▪ Manages and maintains the website for a local meditation center on a volunteer basis. ▪ Built a portfolio and mock business websites (dental, construction, and fitness) with HTML5, CSS3, and JavaScript, emphasizing responsive design. ▪ Applies performance and SEO best practices using Google Lighthouse and the CodeStitch component library.			
Personal Projects			Ongoing
▪ Builds 2D games in Python with Pygame, including an arcade-style space shooter with collision detection, score tracking, and sprite animation. ▪ Hosts Pi-hole for network-wide DNS ad blocking and two Python-based Discord bots on a Raspberry Pi.
